

Environmental Disclosure Statement

Electricity can be generated from a number of different fuel sources, resulting in different emissions. CleanChoice Energy, Inc. will report fuel sources and emissions data twice annually, allowing customers to compare data with other suppliers in District of Columbia. CleanChoice Energy, Inc. offers 100% local, renewable wind energy to our members.

Sources of Electricity Supplied as of 6/30/17

Sources of Electricity	CleanChoice Energy ¹	PJM System Mix
Coal	0%	33%
Oil	0%	0%
Natural Gas	0%	26%
Nuclear	0%	36%
Other	0%	0%
Renewable Energy:		
Solar	1%	0%
Wind	99%	3%
Biomass	0%	0%
Captured Methane Gas	0%	0%
Water	0%	1%
Geothermal	0%	0%
Municipal Solid Waste	0%	1%
Renewable Energy Resources Subtotal	100%	5%
TOTAL	100%	100%

Air Emissions

lbs/MWh Nitrogen Oxides (NOx), Sulfur Dioxide (SO ₂), and Carbon Dioxide (CO ₂) emitted as of 6/30/17.		
	CleanChoice Energy	PJM System Mix
Carbon Dioxide	0 lbs	953 lbs
Nitrogen Oxides	0 lbs	0.68 lbs
Sulfur Dioxide	0 lbs	0.82 lbs

Carbon Dioxide (CO₂) is a "greenhouse gas" which may contribute to global climate change. Sulfur Dioxide (SO₂) and Nitrogen Oxides (NO_x) released into the atmosphere react to form acid rain. Nitrogen Oxides also react to form ground level ozone, an unhealthful component of "smog".

¹This report contains prospective data. CleanChoice Energy, Inc. provides a 100% renewable product procured from known resources comprised of local wind energy. CleanChoice Energy will provide actual data for the calendar year during their annual filing to the PSC. CleanChoice Energy purchases and retires Renewable Energy Certificates (RECs) to offset customers' energy usage. CleanChoice Energy will purchase RECs within 3 months following the close of the calendar year to offset the entirety of all Maryland customers' usage.

²PJM System Mix data from January 2017- June 2017. The sum of the individual fuel sources may not equal 100% due to rounding.
